MR - MRI BRAIN W WO

Reason for exam: Muscle weakness

Technique: Axial pre and post, sagittal and coronal post gadolinium T1, axial fast spin echo, FLAIR, diffusion gradient-echo sequences were performed through the brain on a 1.5 Tesla scanner.

Contrast: 7 cc Gadavist IV

Findings:

Cerebrum: No abnormal signal is identified. There is no evidence of any mass, edema, mass effect or midline shift. No signs of hemorrhage or extra-axial fluid collections. The arteries at the base of the brain are unremarkable.

Midline structures: Intact.

Posterior fossa: Tonsillar ectopia measures 4 mm below the foramen magnum. No evidence of tonsillar or medullary compression. No abnormal signal or mass effect identified.

Gradient-echo/diffusion sequences: Unremarkable. No abnormal signal is apparent. No evidence of ischemia or infarct.

Enhancement pattern: Normal.

Petrous bones and IACs: No masses or destruction. Normal mastoid sinuses.

Sinuses: Normal. No evidence of sinusitis.

Extracranial structures: Unremarkable.

Impression: Low-lying tonsils of the cerebellum, of questionable clinical significance. Otherwise normal study.
