HPI

A 35 years old female is presenting for follow-up on chronic neck pain that started 4 years ago. She reports history of 2 car accidents (she was T-boned in one accident and had a head-on collision in the other accident). She has surgical fusion of 2 spinal vertebrae on November 2021 and she was feeling fine for 1 year. Her pain started recurring again and she is currently managed by pregabalin 50 mg once daily at bedtime (unfortunately pregabalin gave her headaches and she is not able to go up on the dose) in addition to ibuprofen 800 mg once daily and methocarbamol 500 mg every 6 hours as needed for muscle spasm. She is also on hydrocodone 7.5 mg–acetaminophen 325 mg every 4-6 hours as needed for neck pain. She rarely uses it because it is stimulating and is associated with difficulty sleeping at night. She recently had brain MRI to rule out multiple sclerosis and had nerve conduction studies to rule out ALS. Dr. Santiago (neurologist in Casper) found permanent damage at left C6 nerve root and did not find any evidence of MS. On examination, she has normal muscle power in both lower extremity, she has paresthesia over the medial aspect of her right arm. I instructed her to continue current regimen for pain control and I ordered ESR, CRP, RF, and CCP to rule out rheumatoid arthritis.

ROS

Patient reports no fatigue, no fever, and no night sweats. She reports no dry eyes, no irritation, no vision change, no scotoma, and no diplopia. She reports no ear pain, no nose/sinus problems, no sore throat, no loss of hearing, and no tinnitus. She reports no cough, no shortness of breath, no sputum production, no coughing up blood, and no wheezing. She reports no chest pain, no palpitations, no edema, no cyanosis, no known heart murmur, no orthopnea, no paroxysmal nocturnal dyspnea, no syncope, and no lightheadedness. She reports no heartburn, no dysphagia, no nausea, no vomiting, no bloody stool, and no recent change in bowel habits. She

PULLIAM, Viktorya (Id #14331, dob: 12/06/1989)

reports no headaches, no dizziness, no loss of consciousness, no weakness, no numbness, no slurred speech, and no seizures.

Physical Exam

Constitutional: General Appearance: healthy-appearing and appears stated age. Level of Distress: no acute distress. Ambulation: steady gait.

Psychiatric: Insight: good judgement. Mental Status: normal mood, affect, and attentiveness; oriented to person, place, time, and situation; and alert. Memory: recent memory intact and remote memory intact. Speech normal speech and comprehension.

Head: Head: normocephalic and atraumatic.

Eyes: Lids and Conjunctivae: no discharge or pallor and non-injected.

ENMT: Ears: no external ear lesion, tympanic membrane bulging, or middle ear fluid; tympanic membrane intact and pearly-grey; and external ear canals patent. Nose: no discharge, external nose lesion, sinus tenderness, or deviated septum and nares patent. Oropharynx: no erythema or exudates and moist mucous membranes and tonsils not enlarged.

Neck: Neck: supple, trachea midline, no masses, and full range of motion. Lymph Nodes: no cervical lymphadenopathy.

Lungs: Respiratory effort: normal work of breathing and respiration rate and no dyspnea or cough. Auscultation: no wheezing, rales/crackles, or rhonchi and normal breath sounds.

Cardiovascular System: Apical Impulse: not displaced or accentuated. Heart Auscultation: no murmurs, rubs, or gallops and regular rhythm.

Abdomen: Inspection and Palpation: no tenderness, guarding, masses, rebound tenderness, or costovertebral tenderness and soft and non-distended. Bowel Sounds: normal.

Musculoskeletal:: Cervical Spine: **Tenderness on palpation over cervical spine in the middle of her neck**
Tenderness on palpation of paravertebral cervical muscles on the left side.

Neurologic: Gait and Station: normal gait, station, pivot, base, arm swing, get up and go test, and functional reach test. Cranial Nerves: grossly intact. Coordination and Cerebellum: no tremor, bradykinesia, clonus, or pronator drift and finger-to-nose intact and normal heel-to-shin.

Skin: Inspection and palpation: no rash, lesions, ulcer, or jaundice.

Assessment / Plan

1. Chronic neck pain
Continue pregabalin 50 mg once daily at bedtime.
Continue ibuprofen 800 mg once daily
Continue methocarbamol 500 mg every 6 hours as needed for muscle spasm.
Continue hydrocodone 7.5 mg–acetaminophen 325 mg every 4-6 hours as needed for neck pain.
G89.29: Other chronic pain
M54.2: Cervicalgia

2. Multiple joint pain
ESR, CRP, RF, CCP ordered.
M25.50: Pain in unspecified joint
- ERYTHROCYTE SEDIMENTATION RATE*
- C-REACTIVE PROTEIN*
- RHEUMATOID FACTOR*
- CYCLIC CITRULLINATED PEPTIDE (CCP) AB (IGG) Q*

Patient Instructions
1- I ordered blood work to rule out RA
2-continue current medication for neck pain management
3- Follow up as needed

Return to Office
Patient will return to the office as needed.

MRI Report

cc: Doctor,No
Thronburg,Sara M FNP~

EXAM: Cervical spine MRI without contrast

REASON FOR EXAM: CERVICAL DISC DEGENERATION

HISTORY: Neck and right arm numbness. History of fusion in 2020.

COMPARISON: Brachial plexus MRI 6/2/2025

PROCEDURE: Multiplanar multisequence MRI images of the cervical spine were obtained including sagittal T1, T2 and STIR sequences, axial 3D TSE and oblique T2 TFE sequences from C3 through T1 at 3-4 mm intervals without contrast. Field strength 1.5 Tesla.

FINDINGS:

Craniocervical and atlantodental alignment are preserved. Straightening of cervical lordosis. No spondylolisthesis. Vertebral body heights are maintained. Status post ACDF from C5-C7. No evidence of hardware complication. No bone marrow edema or suspicious osseous lesions.

The imaged posterior fossa structures are unremarkable.

Small focus of high T2 signal within the left ventral cord at the inferior C5 level (series 9 image 29). Just inferior to this, at the C5-C6 level, there are punctate foci of T2 hyperintense signal within the left and right central cord (series 9 image 32). No evidence of cord edema. No additional signal abnormalities within the cervical cord.

No potentially concerning extraspinal findings.

Level by level findings:

C2 - C3: No canal or foraminal stenosis.

C3 - C4: No canal stenosis. Bilateral uncovertebral and facet arthropathy, causing mild-moderate right and mild left foraminal narrowing.

C4 - C5: Posterior disc-osteophyte complex, causing mild canal stenosis. Bilateral uncovertebral and facet arthropathy, causing moderate right and mild left foraminal stenosis.

C5 - C6: At the C6 level, there is a central signal abnormality along the ventral thecal sac, causing moderate canal stenosis and deforming the ventral cord. No foraminal stenosis.

C6 - C7: No canal or foraminal stenosis.

Campbell County Health Outpatient Imaging 2
Patient name: PULLIAM,VIKTORIYA A
DOB: 12/06/1989
Account #: V00110103603

C7 - T1: No canal or foraminal stenosis. Mild bilateral facet arthropathy and mild disc bulge.

ORDER #: 0617-0013 MR/MRI cervical spine wo con
IMPRESSION:
1. Small foci of high T2 signal within the left ventral cord at the C5 level and within the left and right central cord at the C5-C6 level, favored to reflect myelomalacia.
2. Moderate canal stenosis at the C6 level, possibly from OPLL.
3. Moderate right C5 foraminal stenosis
4. Additional findings as described.
