CENTRAL WYOMING NEUROLOGY

a Memorial Hospital of Converse County Clinic

Patient: Pulliam,Viktoriya A
DOB: 12/06/1989
Age/Sex: 34 / F
Admission Date: 04/09/24

Medical Record #: MR00140408
Account #: AM0000962138
Attending Provider: Angelo Santiago, MD

Referring Provider
Sara Thronburg, NP-C

Primary Provider
Amy Hawk, NP-C

Nurse Intake notes
Patient here to establish care, c/o bilateral arm and leg weakness, L arm spasticity

Does pt use assistive devices: No Cane, No Walker, No Wheelchair, No Commode Chair, No Hospital Bed, No Respiratory assist device
Does the patient receive Hospice Care?: No
Chief Complaint/History Present Illness

Viktoriya Pulliam is a most pleasant 34-year-old right-handed Caucasian female, who was referred by Sara Thronburg, NP-C for neurological evaluation for progressively worsening symptoms of muscle weakness and 'muscle twitches'. She noticed these approximately about six months ago and had been worsening. The 'muscle twitches' could occur in the abdominal muscles, left arm, and left thigh. She also reports of dropping things easily, to the point that she needs to focus everything that she does. She denies any cranial neuro-symptomatology, changes in her energy, sphincter functions Thinking that these could be from dehydration, she had been drinking quite a bit of water.

She had cervical spine surgery by Dr. Eric Schubert 2021 and suspecting that these could be from her neck as she had cervical spine surgery, she had called Sara Thornburg, NP-C because of stiffness in her neck, some numbness and pain in her left forearm. She was given Medrol Dosepak without any help. She had a cervical myelogram, which was unexplanatory. She did have some mild left C6 radiculopathy on electrodiagnostic study that was done on March 28, 2024. She does report that she had been making some mistakes at work and also wonders whether this is from anxiety. She used to see a therapist in the past.

Review of Systems

General
Full 14 point review of systems is unremarkable except as noted.

The past medical and surgical history, medications and allergies, social history, family history, review of systems were all reviewed by me for today's evaluation and were updated where necessary and discussed with the patient where pertinent.
Current: Headache, Forgetfulness, Loss of weight
EENT
Current: Sinus Problems
GI
Current: Nausea/Vomiting, Diarrhea, Constipation
Musc/Jnt/bn
Current: Pain (Arms and Legs), Weakness (Arms and Legs)

Exam

General
Examined in presence of our medical assistant, Sherrie Phillips, MA

General: Afebrile, Oriented x4, no acute distress and well groomed
Nutritional Appearance: mesomorphic body habitus
HENMT
Head: atraumatic and normal to inspection
Eyes
Periorbital: periorbital findings normal
Eyelids: eyelids normal
Conjunctivae: conjunctivae normal
Neck
General: no lymphadenopathy
Carotids: Yes no appreciable bruits
Chest
Chest: normal inspection of the chest
Resp

Medical Record #: MR00140408
Account #: AM0000962138
Attending Provider: Angelo Santiago, MD

Effort: normal respiratory effort
Auscultation: Yes clear to auscultation bilaterally
Cardio
Rate & Rhythm: regular rate and rhythm
Abdomen
Palpation: soft
Spine
Cervical: normal AROM and Lhermitte's sign negative
Thoracic: normal to inspection
Lumbar: lumbar ROM
Extrem
General: normal to inspection and no clubbing, cyanosis nor edema
Neurology
General: No apparent agitation, appropriate mood and interactive and pleasant
Mental Status: Yes grossly intact
Speech: fluent without appreciable dysarthria
Cranial Nerves: Grossly normal.
Coordination: Abnormal finger-to-nose test, Abnormal heel-to-shin test, Abnormal rapid alternating movement, Abnormal finger/toe tapping, Abnormal appreciable dysmetria, Abnormal appreciable dysdiadochokinesia or Abnormal other
Motor: strength 5/5 throughout (upper/lower ext) and no pronator/parietal drift
Strength: There was notable decreased bulk in her left biceps, which she expressed concern about. I did not appreciate any fasciculations.
Sensory: other (? Sensory level at T6)
DTR's: **Rt Triceps:** 2+, **Lt Triceps:** 2+, **Rt Biceps:** 2+, **Lt Biceps:** 2+, **Rt Brachioradialis:** 1+, **Lt Brachioradialis:** 1+, **Rt Patellar:** 3+, **Lt Patellar:** 3+, **Rt Ankle:** 1+, **Lt Ankle:** 1+
Gait: normal
Balance: Negative Romberg testing, Negative Pull through testing, Negative 25' timed walk

Assessment & Plan

Problems
1. Other symptoms and signs involving cognitive functions and awareness R41.89
2. Muscle weakness M62.81
3. Fasciculations R25.3
4. Anxiety F41.9

Plan
Progressively worsening symptoms of predominantly left sided weakness, cognitive concerns, query sensory level at T7 with symptoms suggestive of fasciculations. We will have her undergo an MRI of her brain to determine a primary demyelinating disorder, e.g. multiple sclerosis and check some blood tests including CBC, CMP, ESR, ANA, TSH, GAD, CPK, and aldolase. Consider spinal cord MRI studies should the brain MRI show findings of a demyelinating condition. We will make further recommendations thereafter.

Plan Detail
Additional Comments
This visit was 60 minutes including seeing the patient myself reviewing available records, discussing

VIKTORIYA A PULLIAM 24-190 3/28/2024

EMG Summary Table									
	Spontaneous					MUAP			Recruitment
	IA	Fib	PSW	Fasc	H.F.	Amp	Dur.	PPP	Pattern
Upper Cervical PSP	N	1+	1+	None	None	N	N	N	N
Middle Cervical PSP	N	1+	1+	None	None	N	N	N	N
Lower Cervical PSP	N	None	None	None	None	N	N	N	N

Summary: The nerve conduction study showed normal distal latencies, amplitudes and conduction velocities in the nerves studied. The median and ulnar F waves were normal. The concentric needle EMG study showed findings of denervation potentials with normal recruitment in the left C6 root innervated muscles.

Interpretation: Abnormal study. There was electrodiagnostic evidence for:

1. A left C6 radiculopathy;
2. There was no electrodiagnostic evidence for any brachial plexopathy or entrapment neuropathy.

CHEYENNE RADIOLOGY

BLACK ROCK
ADVANCED MEDICAL IMAGING LLC

Viktoriya Pullia
DOB: 12-06-1989

Ref Physician: Angelo Santiago, Md
Exam Date: 05-08-2024

MR - MRI BRAIN W WO

Reason for exam: Muscle weakness

Technique: Axial pre and post, sagittal and coronal post gadolinium T1, axial fast spin echo, FLAIR, diffusion gradient-echo sequences were performed through the brain on a 1.5 Tesla scanner.

Contrast: 7 cc Gadavist IV

Findings:

Cerebrum: No abnormal signal is identified. There is no evidence of any mass, edema, mass effect or midline shift. No signs of hemorrhage or extra-axial fluid collections. The arteries at the base of the brain are unremarkable.

Midline structures: Intact.

Posterior fossa: Tonsillar ectopia measures 4 mm below the foramen magnum. No evidence of tonsillar or medullary compression. No abnormal signal or mass effect identified.

Gradient-echo/diffusion sequences: Unremarkable. No abnormal signal is apparent. No evidence of ischemia or infarct.

Enhancement pattern: Normal.

Petrous bones and IACs: No masses or destruction. Normal mastoid sinuses.

Sinuses: Normal. No evidence of sinusitis.

Extracranial structures: Unremarkable.

Impression: Low-lying tonsils of the cerebellum, of questionable clinical significance. Otherwise normal study.

Dictated on: 5/8/2024 9:30 AM
