Hans Carlson, MD at 11/25/2024 1330

Author: Hans Carlson, MD | Service: --- | Author Type: Physician
Filed: 11/25/24 1722 | Encounter Date: 11/25/2024 | Status: Signed
Editor: Hans Carlson, MD (Physician)

Viktoriya Pulliam is a 34 y.o. female who presents today with a history of neck pain following 2 motor vehicle collisions (2019, 2020) and she had 2021 C5-7 ACDF. She notes chronic pain since that time. Since her surgery she has continued to have bilateral upper extremities muscle spasm, paresthesias, and diffuse myalgias. She has had extensive workup including neurology, spine surgery and pain management (prior to the surgery). She apparently is not felt to have ALS or MS. Since surgery she has had treatment with chiropractic treatment, physical therapy, massage therapy with short term relief. She has tried gabapentin without significant changes. She will take occasional over-the-counter medications without significant changes. Her current symptoms consist of muscle spasms in the left arm with wrist and finger flexion and this is unpredictable and she notes elbow pain and left upper extremity weakness. She also has muscle twitches in the quads, stomach and gluteal muscles and this is daily. She notes chronic neck stiffness and diffuse muscles aches that are also intermittent. She also notes left greater than right arm numbness and this tends to be intermittent, happens a few times/week and may last several hours. She also notes her neurologist did labs and brain MRI and reports that this was unremarkable. Her recent 1/2024 cervical spine MRI and 3/2024 cervical spine CT myelogram report is available for review and consistent with prior surgery and mild adjacent level degenerative changes without reported severe nerve root impingement or spinal stenosis. Her recent 2024 left upper extremity electrodiagnostic study is available for review and she is described with a left C6 radiculopathy with acute denervation noted on the electromyography report.

Current Outpatient Medications: omeprazole 20 mg oral capsule,delayed release(DR/EC), Take 20 mg by mouth once daily. Administer 30 to 60 minutes before meals, Disp: , Rfl:
valACYclovir (VALTREX) 1 g oral tablet, 1 tablet Orally bid for 15 days, Disp: , Rfl:

Allergies

Allergen	Reactions
• Naproxen	Tachycardia
• Penicillins	Unknown and Rash

Visit Vitals

Item	Reading
• BP	126/86
• Pulse	80
• Ht	1.651 m (5' 5")
• Wt	70.3 kg (155 lb)
• BMI	25.79 kg/(m^2)

Physical Examination:
Vitals:

	11/25/24 1313
BP:	126/86
BP Location:	Right upper arm
Patient Position:	Sitting
Pulse:	80
Weight:	70.3 kg (155 lb)
Height:	1.651 m (5' 5")
PainSc:	03 - Mild to Moderate
PainLoc:	Neck (Back)

The patient is alert and oriented and cooperative with the examination. The patient is well groomed. Examination of the cervicothoracic spine reveals no evidence of scoliosis or list. There was mild pain with flexion, extension and rotation of the cervical spine. The thoracic spine range of motion was grossly unremarkable. The patient demonstrated mild pain to palpation at the cervical and thoracic spine paraspinal muscles. Motor examination of the upper and lower extremities demonstrated 5/5 motor strength throughout. Light touch was intact throughout the upper extremities, head and neck. Biceps, triceps and brachioradialis reflexes were 1+ on the right and 1+ on the left. No evidence of hyperreflexia of the lower extremities were noted. Shoulder range of motion is normal and impingement maneuvers are negative without pain or instability. The patient's gait was unremarkable and the patient was

independent with transfering. Spurlings maneuver was negative on the right and negative on the left. Radial pulses were intact bilaterally. Good capillary refill of the skin was noted. Skin exam is unremarkable in the head, neck, feet and bilateral upper extremities.

ASSESSMENT:
This patient has a complex and chronic history and abnormal exam with respect to longstanding neck and left upper extremity numbness, weakness, paresthesias refractory to surgery and extensive conservative treatment with probable mechanical neck pain and radiculitis and differential diagnosis including brachial plexopathy, inflammatory arthritis and chronic radiculopathy.

Encounter Diagnoses

Name	Primary?
• Myalgia	Yes
• Brachial plexopathy	
• Cervical radiculitis	

RECOMMENDATIONS:
We have discussed potential management options.
Further evaluation for ongoing symptoms recommended.
If unremarkable then re-evaluate options with respect to pain management and reconditioning.
Consider pain psychology consult as well.

Orders Placed This Encounter

- MRI BRACHIAL PLEXUS LEFT WWO CONTRAST - To evaluate for tumor, infection, or inflammatory process [RAD00048]

Standing Status:	Future
Standing Expiration Date:	12/25/2025
Order Specific Question:	Release result to patient:
Answer:	Immediate
Order Specific Question:	Does the patient have any implanted medical devices or hardware?
Answer:	Unknown
Order Specific Question:	Authorize contrast, study specific medications, lab work, IV access and x-ray orbits.
Answer:	Per Departmental Standard
Order Specific Question:	Preferred Location:
Answer:	External Order [23469]

- CONSULT TO RHEUMATOLOGY
  Diffuse myalgia

Order Specific Question:	Preferred Location:
Answer:	External Order [23469]

Return 1-2 month, for Telephone visit.
